Richmond, VA

Football + Soccer + Baseball + Multi-Purpose Fields

PremierPRO Hybrid Bermuda Grass was scientifically developed by Dr. Milt Engelke (Texas A&M) and Dr. Virginia Lehman to produce the most player-friendly sports turf available. Rated by universities & NTEP for its durability, beauty and cold tolerance—and endorsed by athletes for its superior traction and playability—PremierPRO Bermuda Grass heals quickly from sports-related wear, offers adaptability to a variety of soils, and benefits from early spring green-up.

But more than that, PremierPRO Bermuda Grass is proven to provide exceptional grip. Because the grass grows vigorously from both stolons and rhizomes, and is scientifically rated for superior shear strength, it produces less tufting and better traction for all sports uses. Team PremierPRO brings together the power of world-recognized researchers, sod producers, superintendents, sports turf managers and professional athletes who share information about the grass and its use.

PREMIERPRO™**

PREMIERPRO
Hybrid Bermuda Grass

Benefits of PremierPRO Bermuda Grass:

- » Better shear strength for better traction, less tufting
- » Cold tolerance, from the northernmost parts of the Transition Zone & south
- » Exceptional traffic & wear tolerance, quick recovery from turf injury
- » Dark green color, high turf quality, fine-bladed turfgrass
- » Adaptability to varied soil conditions, tolerance of slightly acidic to alkaline soils
